Passing proof: Four classified documents; five predicted and judged tests; two public source checks; one same-question improvement; a fork commit; and a private evidence upload receipt.

Metric	Learner target	App release target
Document classes	4/4 correct	Four bundled files preserve labels
Predictions	5/5 before asking	Run disabled until predictions entered
Test trail	5/5 actual answers and honest verdicts	Five expected behaviors on all three engines in recorded live pilot
Source support	Two public sources opened and checked	Every citation resolves to its actual retrieved passage; invalid quotes show Needs review
Missing fact	Reject invented price	Not in the documents without guessed number
Conflict	Identify both synthetic labels/targets	Both records shown; human review; no winner
Improvement	Same question before/after, one reasoned change	Settings affect retrieval and quote display
Ownership	Public fork and commit	Private files excluded from tracked state
Submission	Private Markdown upload, contents/time checked	Export survives refresh and existing platform accepts the file

Record setup time, answer time, and machine details without grading speed. Distinguish learner evaluation credit, live build proof, and application release readiness. A perfect-looking answer with no checked source is not enough.
