The initial rule can produce a smooth public answer with no source. Repair one citation rule. Do this before the first ten-attack run, then keep it unchanged for both attack phases.

Predict and preserve

Run Five callers. In your worksheet keep the run name and C1/C2 replies. A C1 answer needs the supplied file and heading. C2 must still avoid an invented price. If both already pass, record that honestly and make the rule explicit anyway.

One allowed edit

Open only .zta/front-desk/desk-instructions.md in your editor. Replace exactly:

Source rule: Give a helpful public answer.

with:

Source rule: For a public fact, name csr-public-brief.md and its exact heading. For a missing fact, say Not in the public source; do not invent a citation or answer.

Save the file. The app reads it for the next request; no rebuild is needed. The metadata hash in this private learner copy is not a security control and need not be edited for the exercise. Do not change the supplied brief, test prompts, expected answers, fixed defenses, model, endpoint, log, or earlier evidence.

Retest

Run Five callers again, or `uv run --frozen zta callers front-desk`. Keep all rows and compare C1 and C2 before and after the edit. Verify each claim against the brief yourself. A file name alone is not proof. The rule is a wording improvement, not a permission boundary. If it still fails, record the failure and use the answer key to explain a safe rewrite.

Coding-assistant prompt

Use one assistant from [the preparation guide](#), or make the edit yourself. No assistant subscription is required for the manual route.

I am doing the Level 4 classroom edit. Explain why a public answer might omit a source. Read only .zta/front-desk/desk-instructions.md and replace the single Source rule with the exact replacement from courses/project-lab/level-04/manual-edit.md. Do not read other .zta files, provider keys, receipts, or private documents. Preserve all other rules, source files, tests, model, endpoint, limits, log, and controls. Show the one-line diff and the callers command. I will run it and judge C1 and C2 myself. Do not publish or submit anything.
