

Instructor Run Sheet - Project Lab Level 5: Choose, Improve, and Present

Outcome

Choose one course project, improve it from test evidence, prove its normal and failure routes, and present the result to the class in three clear minutes.

Alignment

Learning target	Practice	Evidence
Select for usefulness	User and job statement	Chosen project and outcome
Improve from evidence	Before, change, rerun	Tested change
Prove separate routes	Normal, failure, fence, stop	Repeatable receipts
Explain honestly	Timed presentation	Cost, limit, next step

Teaching stance

Level 5 is a studio and demonstration, not a new build night. Reward legible proof and honest limits. Do not let experienced learners hide behind infrastructure detail or beginners apologize for using the core route.

Prepare before learners arrive

- Collect project choices before class when possible.
- Arrange tables by Documents, Watchman, Local Model, and Front Desk.
- Update the dated provider-price snapshot on the cost sheet from an official price page.
- Test the projector, sound, fresh browser, classroom router, and offline packet.
- Print proof boards, rubrics, speaker order, and a visible timer.
- Ask presenters to clean notifications and unrelated tabs.
- Estimate whether three minutes each fits; prepare table rounds for a large class.

Safety boundary

Present only public or synthetic data. No key, private record, owner note, client name, browser history, or unrelated notification may appear. A learner may pass on public speaking, use a recording, or ask a partner to read. Proof still belongs to the learner.

90-minute schedule

Block	Minutes
Arrival, table placement, and screen cleanup	8
Rubric demo and proof-board check	7
Task 1: assemble eight proof items and cost sheet	15
Task 2: fresh normal and failure tests, fix one blocking miss	15
Task 3: paired timed rehearsal	10
Final presentations or table rounds	25
Proof collection, reflection, and close	10
Total	90

Facilitation plan

Opening

Demonstrate a bad proof: a green deployment screen with no browser result, source receipt, or failure route. Then show the eight-item board.

Studio

At each table ask: what should happen, what happened, and what receipt proves it? Permit one blocking fix. Stop feature growth.

Rehearsal

Partners time exactly three minutes and use the rubric. The presenter must use the switch or fallback in rehearsal, not merely name it.

Presentations

Keep the order visible and transitions short. If more than fifteen people present, run table rounds with one representative live demo and collect every individual proof board.

Close

Collect one sentence from each learner: what they will keep using and what still needs human judgment.

Passing proof

Eight items: ownership, before state, tested change, normal run, failure route, privacy or security fence, stop or fallback, and cost plus reflection; followed by a three-minute class presentation.

Grading guide

Check	Meets	Return for revision when
Ownership and before	Learner controls the artifact and names the prior miss	A template is shown without learner decisions
Tested change	Same or equivalent input shows improvement	Change has no before/after evidence
Normal and failure	Both have expected, actual, and receipt	Only the happy path is shown
Fence and stop	Boundary and used control are visible	Secret, private data, or assumed switch appears
Cost and presentation	Estimate is labeled and class can follow three minutes	Deployment status substitutes for user-visible proof

Access and support

- Accept live, saved-run, paper-board, recorded, or partner-read presentation routes.
- Keep the same eight proof items for every route.
- Provide a quiet rehearsal corner.
- Seat Spanish-first presenters with a bilingual helper when available.
- Do not rank learners publicly.

Fallbacks

- Internet down: use each level's saved run and local proof.
- Local model unavailable: use the dated benchmark and explain the exact live check.
- Project fails on stage: state expected behavior, show last verified receipt, and continue.
- Projector down: table rounds from devices or printed proof boards.
- Large class: four parallel tables, three minutes each, one shared closing demo.
- Fifteen minutes behind: shorten transitions, never the proof checklist.
- Price page down: use the dated instructor snapshot and label it.

After class

Record completion by proof item, not applause or polish. Note stalls, total presentation time, fallback use, and translation questions. Keep learner files only under the course's approved retention rule.
