After two attempts or five minutes of a class-time block, use the saved route and record the issue. Access problems do not erase good reasoning. Preparation time can be used for deeper installation help.

Symptom / where	Action	Why	Expected result	If still blocked
uv/claude/ollama command missing	Close and reopen terminal; rerun --version	Reloads the install path	Version prints	Follow the official OS installer guide; attend setup clinic
pyproject.toml not found	Show the clone in Finder/Explorer and open terminal there	Commands need the repo root	pyproject.toml and uv.lock are listed	Reclone your fork in Desktop
Model missing	Open Ollama; run ollama pull gemma3:4b; run ollama list	Loads the planned model	Exact name appears	Finish download before class or use cloud/saved route
Cannot reach Ollama	Open the Ollama app; run doctor	Starts the local service	Provider reachable	Record the error; do not expose port 11434 to the internet
Port 8501 occupied	Check for your already-running app terminal; use its tab or stop it with Ctrl+C	Avoids starting two servers	One app responds	Ask instructor to identify the process; do not kill unknown processes
Key rejected	Rerun setup with your selected provider's key	Corrects configuration without publishing a secret	Access check passes	Create a new class key in the correct account
Quota/rate/billing failure	Inspect provider billing and limits once	Separates payment from code problems	Account ready or a clear account block	Switch manually to local or saved route; no repeated paid attempts
Empty/encrypted/scanned PDF	Use supplied Markdown/text; reopen it before loading	OCR and passwords are outside Level 1	Extracted text is readable	Ask for a smaller text copy
Wrong or vague source	Open retrieved passages; judge as Miss; change one setting/rule	Fluency does not establish support	Same-question rerun is recorded	Keep the miss visible; use saved examples to explain the repair
All answers pass	Run the four-to-one-to-four passage exercise	Creates an observable retrieval limitation	Evidence coverage changes	Compare passages even when answers safely refuse
Coding account limit	Use the exact manual edit card	Preserves the learner's decisions	Same setting change and rerun	Instructor points to one step and returns control
No network or service	Load the five saved examples after writing expectations, or use the printed packet	Keeps evaluation possible	Each result is labeled saved	Write your verdicts and proposed repair on paper

Symptom / where	Action	Why	Expected result	If still blocked
App refresh	Reopen the same local app and tabs	Progress is stored on disk	Predictions, runs, and verdicts remain	Preserve .zta/progress.json for instructor-assisted recovery; never post it publicly
Platform unavailable	Keep exported file; record the time/block	Protects completed work	Local evidence remains	Submit later and verify receipt
