Status: AUTHORED CLASSROOM EXAMPLES, 2026-09-06. These replies, model labels, and times are invented for scoring practice. They are not live model test evidence. Actual model digests/sizes: Not measured in this packet. Offline network observation: Not performed. Predict before reading each answer.

Offline practice

Prompt: rewrite politely in one sentence, clear the shared workbench by 4 p.m. Example: Please clear the shared workbench by 4 p.m. today.

This printed reply cannot show a live disconnection. Write which links a real partner would inspect and what would count as evidence. Use the [command card](#) to explain the next real test.

Six benchmark rows

Read the [same three prompt checks](#) and [public source](#).

Label/test	Invented total seconds	Authored response
gemma3:1b writing	12.4	Please clear the shared workbench by 4 p.m. today so the evening class can use it. Thank you.
gemma3:1b source	9.8	The lab is based in Austin, Texas, and builds local-first systems.
gemma3:1b arithmetic	10.2	The cheapest quote is 84 dollars. Adding 8.25 percent gives 91.93 dollars.
gemma3:4b writing	24.6	Please clear the shared workbench by 4 p.m. today so the evening class can use it. Reply when it is ready.
gemma3:4b source	20.1	Under Where the lab is based: El Paso, Texas. Under Work and systems the lab builds: local-first, provenance-aware systems for legal, archival, and industrial work.
gemma3:4b arithmetic	18.7	84 is the cheapest. $84 \times 0.0825 = 6.93$ tax. $84 + 6.93 = 90.93$ dollars.

Score each yourself before opening the answer key. Copy route = authored saved example. Do not fill these times into a row marked own computer. Explain at least one correction and why speed alone would be a weak choice.

Before and after one writing-rule edit

Both test prompts are in `prompts.json`: writing and missing. Model creation: Not performed here.

Before normal: The shared workbench needs to be cleared for the evening class. Please clear it by 4 p.m. today. Reply when it is ready.

Before missing: No price or delivery date has been supplied. Ask a person at Celaya Solutions to confirm a quote and schedule.

Predict the result of replacing the paragraph rule with exactly two short sentences under 50 words. Keep all other rules unchanged.

After normal: Please clear the shared workbench by 4 p.m. today so the evening class can use it. Reply when it is ready.

After missing: No price or confirmed delivery date is provided. Ask a person to confirm those details.

Count sentences/words, check deadline/reply, and judge the missing-information stop. Record the exact edit, what improved, and which live commands remain unperformed. This exercise can show your reasoning without pretending the software ran.

Finish

Complete all worksheet sections with the saved route labeled. Leave device size/digest, observed disconnect, actual creation, and portal receipt Not performed where unavailable. State a local/cloud choice and the exact next live check. Keep the file private and submit only through the approved class portal when available.
