Reuse an earlier repair: show before, one change, same-input after, and verdict. Do not reset a lock, delete state, or fake a miss. Keep failed changes labeled.

Choose the matching boundary

Project	Permitted classroom change	Check afterward
Documents	Follow the Level 1 edit card : one rule or retrieval setting	Same missed question, then the original five checks
Watchman	Follow the Level 2 edit card : unrelated practice-page paragraph only	Same marked value remains no change in local rehearsal
Local Model	Follow the Level 3 edit card : one sentence rule in the private Modelfile	Recreate named model and run both normal/missing tests
Front Desk	Follow the Level 4 edit card : one Source rule	Five callers; compare C1/C2 and keep locked phase

The Watchman footer edit tests unchanged behavior, not an alert-bug repair. A clearer instruction can count if a partner could not repeat a check before and can after; record both observations.

Manual steps

1. Open the matching earlier card. Write the observed miss or unmet need and one prediction in your private worksheet.
2. Preserve the before receipt. If missing, label it missing and use saved teaching evidence for analysis; do not fabricate it.
3. Make only that card's allowed edit. Keep prompts, sources, base model, endpoint, tests, control settings, and earlier evidence unchanged.
4. Run the card's exact retests. Record actual outputs even if they fail, truncate, or take too long.
5. State what improved, stayed the same, or got worse. Undo only your one change if needed; keep both attempts.

Optional assistant route

Reuse your installed assistant and the earlier card's bounded prompt. Only its named file is in scope. Keep other private files, receipts, keys, and bills out. Use the manual route if access fails.

For the presentation itself you can use this request with a screen-safe summary:

Read the Level 5 presentation card. Use only the synthetic summary I supply. Help shorten my three-minute script. Preserve every failure, evidence label, cost assumption, and unknown. Do not invent runs, receipts, savings, customers, or results. Do not open .zta/, change files, publish, or send anything. I will verify each claim against my own evidence.

Stop after one repair. After two attempts or five minutes, open the outage packet and record the next check.
