Code changes go to your GitHub fork. Evidence goes to the course platform. The export is one Markdown file; no ZIP or public chat link is needed.

Where	Action	Why	Expected result	Recovery
Browser	Open https://learn.zero2agent.org/auth/users/sign_in	Uses the branded course entry	Sign-in form appears	If unavailable, keep local work and report the access block
Sign-in form	Use your existing course login; if invited for the first time, finish the password-setup link from the enrollment email	Activates the correct learner identity	Course dashboard appears	Use password recovery or ask the instructor to resend enrollment; never share a password
Course list	Open Zero to Agent / ZTA; if absent, complete the course join flow with the code the instructor gives privately	Enrolls the correct account	The five-level course is visible	The instructor resolves missing enrollment; no course access code is published in this repo
Course assessments	Open Level 1 - Your Documents Answer Back	Opens the graded activity	File-upload control and submission instructions appear	Tell instructor if the assignment is closed or the title is from a retired course
Local app / Proof	Complete the checklist and click Export PROJECT-LAB-01.md	Creates a portable record of the work	Browser downloads a nonempty Markdown file	Allow this download or export again; it does not upload automatically
Level 1 upload	Choose file; select PROJECT-LAB-01.md; read/complete any displayed integrity acknowledgment; click Submit	Sends evidence privately	Confirmation and submission-history entry appear	Read the error; keep the local file if the service is unavailable
Submission history	Open the latest entry and view/download the submitted file; compare the nickname, final commit, and last run	Verifies receipt and contents	Correct file and timestamp are visible	Resubmit the corrected file if needed; a download alone is not a receipt

The private platform is maintained separately. A real student-account upload pilot is a release gate; screenshots and the exact observed navigation are recorded in release/verification.md. Do not use an instructor-only page as proof that students can upload. Personal enrollment links/codes and student files never belong in this public repo.

Level 2 submission

Use the same sign-in and course-list steps, then open **Level 2 - The Night Watchman**. Its evidence file is `.zta/PROJECT-LAB-02.md`, created by `zta prepare watchman` and completed in a text editor. Use the upload control's file picker, navigate to the course clone's `.zta` folder, and select that file. On Mac the file picker can open the folder with `Command+Shift+G` and the actual folder path; never paste a sample path. On Windows type the actual `.zta` folder path in the file picker's address bar.

Submit, open the resulting entry, and view/download the file. Compare your nickname, final run link, and off-switch evidence. Record the receipt privately. A missing Level 2 form or inaccessible student account remains a block, not a reason to publish the worksheet. A real Level 2 student-account upload/reopen pilot remains required in `release/level-02-verification.md`.
