

Level 5 Presentation Rubric

Three minutes per learner. The learner may use a live build or the course outage packet. The passing standard is the same.

Part	Time	What the class sees
Outcome	30 seconds	Who the project helps and what it does, in plain words
Normal run	60 seconds	A fresh input and the expected result
Failure and fix	45 seconds	A miss or attack, the change, and the improved result
Fence	30 seconds	The source check, privacy boundary, off switch, or fallback
Cost and next step	15 seconds	What it costs and the next safe improvement

Score each line 1, 2, or 3:

- It works: the evidence supports the claim.
- It is honest: the limit, failure, and cost are visible.
- It is theirs: the learner can explain the choices and run the switch or fallback.

Nine is a complete demonstration. A learner passes the level with the eight required proof items in the worksheet and a presentation that the class can follow. Applause is for every learner. Scores guide revision; they do not rank people.
