Use this to judge reasoning and observed results, not to demand identical model wording.

Task 1

An own-device offline pass names the model/digest, answer, receipt, all checked external connections, observed disconnect/restore times, and partner. `network_disconnect_observed: null` in the automatic receipt is correct: the human worksheet supplies the observation. A connected rehearsal, saved packet, or doctor output alone cannot pass as an observed offline run.

Task 2

Writing must preserve the 4 p.m. deadline and request for a reply, stay polite and under 70 words, and invent no threat/policy. Source must say El Paso, Texas, and accurately summarize the listed local-first, provenance-aware systems; it must identify both supplied headings. The dated source is the grading reference, not a live-current fact assertion. Arithmetic: cheapest 84; tax 6.93; total 90.93. A made-up total is score 1.

All six rows need name, digest/bytes, total completion time, route, score/verdict, and a reason. A saved row uses authored illustration times, never the student's own measured times. Blank/null quality fields in automatic receipts are deliberate. Students score in their worksheet. Token-limit answers are incomplete; failures have no invented time or score.

Task 3

The helper reuses `gemma3:1b` under `zta-desk:latest`. It does not train new weights. Before and after use the identical writing/missing prompts. The useful one-line edit requests two short sentences under 50 total words. Accept an honest failure plus correction plan; do not accept deleted failures or changed test prompts as improvement proof. Missing price/date must stay unknown and go to human confirmation, with no fabricated range or date.

Common misunderstandings

- Disk size is not RAM use; working memory also holds the active job.
- Loopback endpoint plus local metadata is evidence about this route, not all computer traffic.
- Same seed/settings help comparison but do not remove hardware/version variation.
- Prompt rules and temperature do not guarantee safety or factual accuracy.
- Code tests do not prove model behavior, physical disconnection, or portal submission.
- Private worksheet creation is not a course upload. Reopen the actual saved submission.

Saved-packet key

The saved 1B writing example omits the reply request: 2 with that correction. Its source example says Austin: 1 and correction to El Paso. Its arithmetic example says 91.93: 1 and correction to 90.93. The three saved 4B examples meet the supplied checks: 3 each. These are authored exercises, not claims about those models' measured ability.

Before helper example: acceptable reminder and honest missing-information stop. After example: two sentences under 50 words retaining deadline/reply, and the missing-information stop still holds. A local/cloud choice should name data transfer,

hardware/time or capability, and human verification; no single answer suits every job.
